

NIKOLAJS MASKAVS

Automation Engineer | n8n, Python, Azure, Ansible
Riga, Latvia | nikolaymaskav@gmail.com | +371 26612676

PROFILE

Automation engineer with four years of hands-on experience shipping production automation at a mid-sized cloud MSP. Comfortable across the full stack of a workflow platform: datalake pulls, CSV parsing at scale, API design, authentication, and documentation. I tend to build things other teams can actually use without asking me questions, which is the part most people skip. Strong written English, distributed-team native, used to delivering with stakeholders across engineering, security, and ops.

WORK EXPERIENCE

Qbeyond AG, Latvian branch | Cloud Operations Specialist

2021 to present

- Designed and shipped a CMDB query pipeline on the company n8n platform: pulls the full Qbeyond CI catalog from an AWS datalake, parses and deduplicates around 88,000 rows per run with memory-safe streaming, and upserts into a queryable data table. Two consumer interfaces on top, a form for humans with CSV export and an authenticated JSON API for automations. Documented on Confluence, used across security and ops teams.
- Earlier work focused on Ansible-driven patch management and system configuration across Linux and Windows. Wrote and maintained the playbooks, tuned them, handled the incidents when they misbehaved.
- Run technical scoping with internal stakeholders across engineering, security, monitoring, and database teams. Translate between what each team wants and what the platform can actually do.
- Project-managed one cross-department initiative end to end. It shipped.
- Azure and Azure DevOps for infra tracking, ticket routing, incident triage.

RevPanda | Technical Solutions Specialist

2019 to 2021

- Built and optimized performance-focused websites for iGaming operators in a small startup environment. Worked directly with marketers and external partners on tight deadlines. Learned to ship things that make money rather than things that are clever.

Magebit | Web Developer

2017 to 2019

- Built responsive client sites using a modern web stack. Worked with designers and project managers to deliver on schedule. Foundation in how to break a problem down and finish it.

SKILLS

Automation platforms	n8n (deep, production), Zapier, Make
Languages	JavaScript (in automation context), Python (basics), Bash
Infrastructure	Ansible, Azure, Azure DevOps
Data	REST APIs, JSON, CSV at scale, SQL (basic)
Operations	Systems monitoring, incident response, documentation
Communication	Cross-team coordination, written documentation, translating technical for non-technical

LANGUAGES

English Fluent (IELTS 8.0) **Russian** Native **Latvian** Native **German** Basic, learning **Portuguese** Basic
